

Building and Sites Manual

LANSING SCHOOL DISTRICT

LANSING, MICHIGAN

PREFACE

This manual was one outcome of a research survey project conducted from April, 1966 to August, 1966. The assumption underlying the project was that there was a need for a composite set of detailed information sheets about existing facilities within the Lansing School District.

The expansion of the school district and the increase in enrollments made it impractical to maintain information files on facilities only within each building. Several requests for the centralization of such was made by administrative personnel so that instructional and modernization programs could be discussed without having to visit the specific building being discussed.

The information contained in this manual was obtained from blueprints, departmental files, and the 1960 U. S. Census Report. The comprehensiveness of this inventory was possible because of the efforts and cooperation of many Lansing School District employees under the leadership of Dr. Edward Remick, Consultant in Research.

The manual was designed so that revisions to individual sections can be made periodically; it should assist in the evaluation of school plant utilization and subsequent expansion as it pertains to long range requirements.

William R. Manning
Superintendent of Schools
